- Setting up infrastructure. (Server, Database, DNS, CI/CD, Log Management, Docker, Kubernetes)

School

Industrial Manager apprenticeship

ic! berlin brillen GmbH, Berlin

08/2015 – 08/2018

During my apprenticeship I was able to use Python to automate the creation of several reports. This potential was quickly noticed by my superiors, who kept giving me more and more IT related tasks.

Before long I was working fully in the IT department, being promised an IT position directly after my apprenticeship ended, as they were very happy with my work.

During this time, I learned the basics of Java and C#, since those two languages were what they used by all their custom written software, as well as the SAP B1 SDK.

High-school diploma

Ulrich von Hutten Gymnasium, Berlin

06/2013 – 06/2015

Even though I didn't care much for the IT classes in school, I still loved computers and using them in cheeky ways. I wrote my first crawler during this time for anime/manga sites to be able to view them offline (for when my parents used turn off the internet connection during the night).

I also wrote a social media bot for twitter, that you could feed a set of responses and it would dynamically answer with those, to all the accounts you followed. Although this was clearly not appropriate, I got a couple million of impressions with it, which satisfied little me back in the day.

Skills

IT Skills:

Programming languages:	Java, C#, Go, PHP, Python, SQL, Bash, JS
Frameworks:	Spring, ASP.NET Core, JavaFx, WPF, NodeJS
Databases:	MySQL, MSSQL, PostgreSQL
IDEs:	JetBrains, Visual Studio
Tools:	Docker, Kubernetes, Terraform
Other:	Windows, Linux, Word, Excel

Languages:

German (native tongue)
English (excellent knowledge, speaking as well as writing)

Hobbies:

Fitness, Hiking, Writing, Computers
